Custom Built Aluminium Trailers

Cape Marine design and build SEMAC heavy duty aluminium utility trailers exclusively for our SEMAC Shallow Draft Vessel clients. Built to last the life of the vessel and that could be many decades, our SEMAC custom designed trailers are lightweight, won't rust, will outlast any gal steel trailer and are all about practicality and safety.

Unlike most boat trailers when your SEMAC vessel is on the water SEMAC flat bed utility trailers can be used for transporting building materials, sand bags, fish traps, oyster trays, bins, tools and equipment to and from the vessel.

So for getting you on the water safely and efficiently or when you're heading home and there's a windward tide running hard across the boat ramp, you've got a tonne of gear on board and crew to think about you'll be glad you have a custom built SEMAC aluminium utility trailer to get you off the ramp and back on the road.

Cape Marine uses Trojan Duratorque Rubber Suspension Systems and quality trailer components.
