

# UTILITY FLOOD RESCUE

**SEMAG “Utility Flood Rescue Vessels” are purpose Built, six meter rapid response shallow draft aluminium vessels for flood rescue, emergency search and rescue and re supply tasks on rivers, lakes and harbours.**

Built to “National Marine Safety Council” standards, they feature excellent stability, load capacity and maneuverability in fast flowing water with the ability to retrieve persons from the water and ample deck space to care for patients.

Rated for up to one hundred and twenty horse power in single or twin outboard motor configurations, the vessels are able to carry two crew and ten passengers or a one tonne payload.

The helm and command console features a radio, compass, combined GPS sounder and an instrument package that includes trim and fuel gauges, tachometer, voltmeter, engine hourmeter and warning alarms with high flow electric and manual bilge pumps. The vessels are fitted with navigation, deck and floodlighting with spare propellers, tools kit, first aid kit and all mandatory marine safety equipment.

Transported by 4x4 vehicle on a SEMAG aluminium utility boat trailer with an extendable draw bar for effective launching and recovery in extremely shallow water and a mesh deck enabling supplies and equipment such as pumps, pallets, fodder or sandbags to be carried to and from the vessel on the trailer when the vessel is on the water.
